NATIONAL LIBRARY OF MEDICINE
WASHINGTON, D. C.

PREFACE

Recent articles in the medical literature indicate a growing concern with mycotic infections of the lung especially in the area of differential diagnosis of pulmonary tuberculosis and pulmonary neoplasms. The appearance of mycotic infections after the use of antibiotics in postoperative therapy or after the prolonged use of antibiotics in the treatment of various diseases is meriting much attention, as shown in both clinical and research reports.

This bibliography is a selected list of publications in English, French, German, Italian, and Spanish on pulmonary mycotic infections covering the period 1957 to April 1961 and supplements a previous bibliography, Fungus Infections, covering literature of 1952 through 1958, issued by the National Library of Medicine in 1959.

DOROTHY BOCKER, M. D.
